

Crypto Factor

White Paper

Platform Overview

Crypto Factor is a new concept in the DeFi yield farming space. It combines familiar features of yield farming with a new type of cryptocurrency mining first deployed on the Binance Smart Chain. We refer to this new type of farming as *hybrid mining*.

Whereas traditional yield farms depend on a native token, which has no extrinsic value outside of the farm, hybrid mining allows investors to acquire yield on their favourite cryptocurrencies. As the value of the mined cryptocurrency is extrinsically defined, its value is *guaranteed* not to reduce as a consequence of Crypto Factor's mining platform. In short: we believe acquiring high daily yield on the most popular cryptocurrencies is a recipe for success.

Our team has taken advantage of this innovative concept to create sustainable short term, medium term and longer term yield bearing products that meet all risk profiles. For each mined cryptocurrency, Crypto Factor provides multiple vault-like systems with fixed-rate APRs. The APR of each vault depends on the length of its corresponding investment plan (see *Table 1* for details).

Crypto Factor investors can therefore earn a *high and stable* passive income on a continuous basis. Principal deposits cannot be withdrawn. Instead, all investors receive a daily dividend, *which can be withdrawn at any time*. To further enhance each investor's return, Crypto Factor incorporates a multi-level affiliate system that rewards 5 levels of reference:

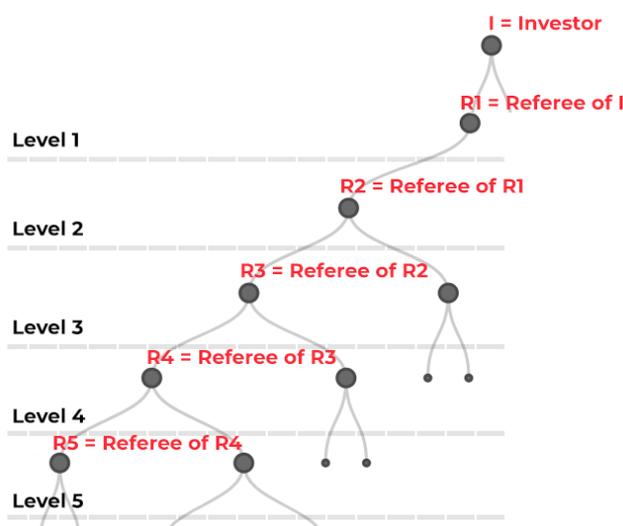

Figure 1: 5 Levels of Reference

When each of the referee investors in *Figure 1* deposits into Crypto Factor's vaults, the initial investor receives a percentage of the deposited amount as a referral bonus (see *Table 2* for details). *Referral bonuses can be withdrawn at any time*. Crypto Factor's 5 level affiliate system generously rewards all investors who share our platform on their social media profiles, including Twitter, TikTok and YouTube. We expect this feature will attract the attention of top crypto influencers.

Project Fees and Buy Backs

We have the lowest fees in hybrid mining. Just 8% fees are charged by the developers. Moreover, the development fee is charged to the contract balance, not to individual investors. This ensures investors' rewards are calculated using 100% of their deposited amount.

We have chosen to incorporate buy backs into our mining platform, just like traditional yield farms. To achieve this, we include a buy back wallet in each of our smart contracts. 2% of each deposit is transferred to the buy back wallet. Every Monday, all funds in the buy back wallet will be *reinvested* into the platform to boost the respective contract's balance. Our experience tells us that this feature will provide enhanced sustainability.

Is the Smart Contract Safe?

Yes, all of Crypto Factor's smart contracts are verified when they are deployed on the Binance Smart Chain. This can be checked by following the link provided on each webpage.

Audits

Crypto Factor's smart contract are *carefully* forked from BNB Factor, which has been audited by Certik and Haze Security. *The audits found no vulnerabilities, no backdoors, no rugpulls*. Ask one of our team for a link to one of BNB Factor's audits.

Why Trust Us?

Crypto Factor's lead developer, Von Schmickle, has a long history of developing smart contracts. To date, Von has deployed 10 very successful yield mining contracts on his Multi-Chain Miner platform, with no faults or backdoors.

Von popularized crypto yield mining: he was the first developer to deploy yield mining contracts on other block chains outside of Binance, as well as develop the latest yield mining contract frequently used to mine non-native tokens. The template UI for yield mining is also a product of Von Schmickle. His novel efforts have been copied and pasted countless times by less adept developers.

Von believes hybrid yield mining provides high sustainable yield. Crypto Factor is therefore not only a safe platform to use on the Binance Smart Chain, it is simply the best platform to use.

Participating in Crypto Factor

Crypto Factor's hybrid mines operate on the Binance Smart Chain. Participating in hybrid yield mining is as easy as 1, 2, 3:

1. Approve spending the yield mine's token on our webpage
2. Deposit your investment into the vault of your choice
3. Share your referral link with your crypto friends and followers to boost your rewards

All rewards can be withdrawn on a daily basis.

Devices

In order to interact with the platform flawlessly, we recommend using MetaMask or Trust Wallet. If using a mobile device, we recommend using MetaMask's built-in browser.

Investment Plans

Each investment plan is for a pre-determined time frame and has a known APR. As such, investors can easily calculate their returns ahead of time. See *Table 1* for details.

Each plan typically has a minimum investment. If applicable, this will be displayed in the plan's information box on the webpage.

Table 1: Investment Plans

Plan	Daily APR (%)	Length (days)
1	3.0	Infinity
2	7.0	40
3	6.5	60
4	6.0	90

Investors can deposit as many times as they wish, including multiple times in the same investment plan or in multiple different plans. There is no limit. From our experience, successful investors spread their risk to maximize their reward, thereby utilizing various plans.

Re-investing

The decision is yours: you can reinvest your rewards or referral bonuses as often as you like. Most people wait to reclaim enough rewards to cover their principal investment, and then actively re-invest their rewards to create a compounding effect. This can boost daily earnings exponentially.

Affiliate Programme

Crypto Factor's affiliate programme is extremely generous and has 5 levels of reference.

Table 2: Affiliate Programme

Level	Referral Bonus (%)
1	7.0
2	3.0
3	1.5
4	1.0
5	0.5

When each of the referee investors in *Figure 1* deposits into Crypto Factor's vaults, the initial investor receives a percentage of the deposited amount as a referral bonus, according to the table above. *Referral bonuses can be withdrawn at any time.*

Crypto Factor's 5 level affiliate system generously rewards all investors who share our platform on their social media profiles, including Twitter, TikTok and YouTube. We expect this feature will attract the attention of top crypto influencers.

Community Feedback

We are thankful for our ongoing community feedback. Crypto Factor has been developed with our community in mind. We have factored in many of our investors' comments:

1. We have the lowest developer fees in the hybrid yield mining space
2. We have incorporated a buy back wallet feature to reinvest in our own platform
3. *The developers will no longer be participating in our platforms as investors*
4. We have vastly increased our marketing budget and continue to establish links with top crypto influencers

Road Map

Crypto Factor is a project under the management of the Multi-Chain Miner group, with a very dedicated team who have extensive experience in decentralized finance. They pioneered non-native crypto mining and paved the way for other projects to develop along this path. We have many more interesting projects in the pipeline:

Q2 2021	<i>Multi-Chain Miner Dapp: native yield mining (MATIC, FTM, BNB, AVAX)</i>	✓
Q3 2021	<i>Multi-Chain Miner Dapp: non-native yield mining (BUSD, USDC, CAKE,...)</i>	✓
Q4 2021	<i>Crypto Factor Dapp: hybrid yield mining (ADA, more to come)</i>	✓
Q1 2022	<i>Chain-native yield mining: Dapps on Cardano, Solana, DOT</i>	
Q2 2022	<i>NFT yield mining. A brand-new concept.</i>
